CONSORT-EHEALTH (V 1.6.1) - Submission/Publication Form

The CONSORT-EHEALTH checklist is intended for authors of randomized trials evaluating web-based and Internet-based applications/interventions, including mobile interventions, electronic games (incl multiplayer games), social media, certain telehealth applications, and other interactive and/or networked electronic applications. Some of the items (e.g. all subitems under item 5 - description of the intervention) may also be applicable for other study designs.

The goal of the CONSORT EHEALTH checklist and guideline is to be

- a) a guide for reporting for authors of RCTs,
- b) to form a basis for appraisal of an ehealth trial (in terms of validity)

CONSORT-EHEALTH items/subitems are MANDATORY reporting items for studies published in the Journal of Medical Internet Research and other journals / scientific societies endorsing the checklist.

Items numbered 1., 2., 3., 4a., 4b etc are original CONSORT or CONSORT-NPT (non-pharmacologic treatment) items.

Items with Roman numerals (i., ii, iii, iv etc.) are CONSORT-EHEALTH extensions/clarifications.

As the CONSORT-EHEALTH checklist is still considered in a formative stage, we would ask that you also RATE ON A SCALE OF 1-5 how important/useful you feel each item is FOR THE PURPOSE OF THE CHECKLIST and reporting guideline (optional).

Mandatory reporting items are marked with a red *.

In the textboxes, either copy & paste the relevant sections from your manuscript into this form - please include any quotes from your manuscript in QUOTATION MARKS, or answer directly by providing additional information not in the manuscript, or elaborating on why the item was not relevant for this study.

YOUR ANSWERS WILL BE PUBLISHED AS A SUPPLEMENTARY FILE TO YOUR PUBLICATION IN JMIR AND ARE CONSIDERED PART OF YOUR PUBLICATION (IF ACCEPTED).

Please fill in these questions diligently. Information will not be copyedited, so please use proper spelling and grammar, use correct capitalization, and avoid abbreviations.

DO NOT FORGET TO SAVE AS PDF _AND_ CLICK THE SUBMIT BUTTON SO YOUR ANSWERS ARE IN OUR DATABASE !!!

Citation Suggestion (if you append the pdf as Appendix we suggest to cite this paper in the caption):

Title of your manuscript *

Provide the (draft) title of your manuscript.

Exploratory Study for Using the mobile Hudl App with Telehealth: A Randomized Controlled Trial Shows Positive Impact on Home Exercise Program Adherence in People with Chronic Diseases and in Financial Distress

Name of your App/Software/Intervention *

If there is a short and a long/alternate name, write the short name first and add the long name in brackets.

Hudl Technique® app

Evaluated Version (if any)

e.g. "V1", "Release 2017-03-01", "Version 2.0.27913"

Your answer

Language(s) *

What language is the intervention/app in? If multiple languages are available, separate by comma (e.g. "English, French")

English

URL of your Intervention Website or App

e.g. a direct link to the mobile app on app store (itunes, Google Play), or URL of the website. If the intervention is a DVD or hardware, you can also link to an Amazon page.

<https://www.hudl.com/products/hudl>

URL of an image/screenshot (optional)

Your answer

Accessibility *

Can an enduser access the intervention presently?

- ☐ access is free and open
- ☐ access only for special usergroups, not open
- ☐ access is open to everyone, but requires payment/subscription/in-app purchases
- ☐ app/intervention no longer accessible
- ☒ Other: The Hudl app is commercially available - the intervention was individualized

Primary Medical Indication/Disease/Condition *

e.g. "Stress", "Diabetes", or define the target group in brackets after the condition, e.g. "Autism (Parents of children with)", "Alzheimers (Informal Caregivers of)"

Adults with chronic diseases and in financial distress

Primary Outcomes measured in trial *

comma-separated list of primary outcomes reported in the trial

HEP adherence and compliance

Secondary/other outcomes

Are there any other outcomes the intervention is expected to affect?

satisfaction with the PT care and with the Hudl Technique® app and telehealth in terms of feasibility

Recommended "Dose" *

What do the instructions for users say on how often the app should be used?

- ☒ Approximately Daily
- ☐ Approximately Weekly
- ☐ Approximately Monthly
- ☐ Approximately Yearly
- ☐ "as needed"
- ☐ Other:

Approx. Percentage of Users (starters) still using the app as recommended after 3 months *

- ☐ unknown / not evaluated
- ☐ 0-10%
- ☐ 11-20%
- ☐ 21-30%
- ☐ 31-40%
- ☐ 41-50%
- ☐ 51-60%
- ☒ 61-70%
- ☐ 71%-80%
- ☐ 81-90%
- ☐ 91-100%
- ☐ Other:

Overall, was the app/intervention effective? *

- ☒ yes: all primary outcomes were significantly better in intervention group vs control
- ☐ partly: SOME primary outcomes were significantly better in intervention group vs control
- ☐ no statistically significant difference between control and intervention
- ☐ potentially harmful: control was significantly better than intervention in one or more outcomes
- ☐ inconclusive: more research is needed
- ☐ Other:

Article Preparation Status/Stage *

At which stage in your article preparation are you currently (at the time you fill in this form)

- ☐ not submitted yet - in early draft status
- ☒ not submitted yet - in late draft status, just before submission
- ☐ submitted to a journal but not reviewed yet
- ☐ submitted to a journal and after receiving initial reviewer comments
- ☐ submitted to a journal and accepted, but not published yet
- ☐ published
- ☐ Other:

Journal *

If you already know where you will submit this paper (or if it is already submitted), please provide the journal name (if it is not JMIR, provide the journal name under "other")

- ☐ not submitted yet / unclear where I will submit this
- ☒ Journal of Medical Internet Research (JMIR)
- ☐ JMIR mHealth and UHealth
- ☐ JMIR Serious Games
- ☐ JMIR Mental Health
- ☐ JMIR Public Health
- ☐ JMIR Formative Research
- ☐ Other JMIR sister journal
- ☐ Other:

Is this a full powered effectiveness trial or a pilot/feasibility trial? *

☒ Pilot/feasibility

☐ Fully powered

Manuscript tracking number *

If this is a JMIR submission, please provide the manuscript tracking number under "other" (The ms tracking number can be found in the submission acknowledgement email, or when you login as author in JMIR. If the paper is already published in JMIR, then the ms tracking number is the four-digit number at the end of the DOI, to be found at the bottom of each published article in JMIR)

☒ no ms number (yet) / not (yet) submitted to / published in JMIR

☐ Other:

TITLE AND ABSTRACT

1a) TITLE: Identification as a randomized trial in the title

1a) Does your paper address CONSORT item 1a? *

I.e does the title contain the phrase "Randomized Controlled Trial"? (if not, explain the reason under "other")

☒ yes

☐ Other:

1a-i) Identify the mode of delivery in the title

Identify the mode of delivery. Preferably use "web-based" and/or "mobile" and/or "electronic game" in the title. Avoid ambiguous terms like "online", "virtual", "interactive". Use "Internet-based" only if Intervention includes non-web-based Internet components (e.g. email), use "computer-based" or "electronic" only if offline products are used. Use "virtual" only in the context of "virtual reality" (3-D worlds). Use "online" only in the context of "online support groups". Complement or substitute product names with broader terms for the class of products (such as "mobile" or "smart phone" instead of "iphone"), especially if the application runs on different platforms.

... Home Exercise Program Adherence "in People with Chronic Diseases and in Financial Distress"

1b) ABSTRACT: Structured summary of trial design, methods, results, and conclusions

NPT extension: Description of experimental treatment, comparator, care providers, centers, and blinding status.

1b-i) Key features/functionalities/components of the intervention and comparator in the METHODS section of the ABSTRACT

Mention key features/functionalities/components of the intervention and comparator in the abstract. If possible, also mention theories and principles used for designing the site. Keep in mind the needs of systematic reviewers and indexers by including important synonyms. (Note: Only report in the abstract what the main paper is reporting. If this information is missing from the main body of text, consider adding it)

1   2   3   4   5

subitem not at all important   ☐   ☐   ☐   ☒   ☐   essential

Clear selection

Does your paper address subitem 1b-i? *

Copy and paste relevant sections from the manuscript abstract (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

We performed a randomized controlled trial where "the experimental group received weekly HEP demonstrations through app videos on a tablet and received feedback on their self-recorded HEP video performance from the telehealth-physical therapist. The control group received HEP on paper without feedback as is custom in PT practice."

1b-ii) Level of human involvement in the METHODS section of the ABSTRACT

Clarify the level of human involvement in the abstract, e.g., use phrases like "fully automated" vs. "therapist/nurse/care provider/physician-assisted" (mention number and expertise of providers involved, if any). (Note: Only report in the abstract what the main paper is reporting. If this information is missing from the main body of text, consider adding it)

1   2   3   4   5

subitem not at all important   ☐   ☐   ☐   ☒   ☐   essential

We performed a randomized controlled trial where the experimental group received weekly HEP demonstrations through app videos on a tablet and received feedback on their self-recorded HEP video performance "from the telehealth-physical therapist". The control group received HEP on paper "without feedback as is custom in PT practice."

1b-iii) Open vs. closed, web-based (self-assessment) vs. face-to-face assessments in the METHODS section of the ABSTRACT

Mention how participants were recruited (online vs. offline), e.g., from an open access website or from a clinic or a closed online user group (closed usergroup trial), and clarify if this was a purely web-based trial, or there were face-to-face components (as part of the intervention or for assessment). Clearly say if outcomes were self-assessed through questionnaires (as common in web-based trials). Note: In traditional offline trials, an open trial (open-label trial) is a type of clinical trial in which both the researchers and participants know which treatment is being administered. To avoid confusion, use "blinded" or "unblinded" to indicated the level of blinding instead of "open", as "open" in web-based trials usually refers to "open access" (i.e. participants can self-enrol). (Note: Only report in the abstract what the main paper is reporting. If this information is missing from the main body of text, consider adding it)

1 2 3 4 5

subitem not at all important ☐ ☐ ☐ ☒ ☐ essential

"We recruited patients scheduled for outpatient PT."... "The treating therapist and data analyst were blinded to the allocation." Demographic, clinical, and health coverage information was "collected" for screening and baseline measurements. Adherence and compliance were "evaluated". Both groups "completed surveys" at 8 and 24 weeks on satisfaction with PT care and, for the experimental group, also satisfaction with the app/telehealth use.

1b-iv) RESULTS section in abstract must contain use data

Report number of participants enrolled/assessed in each group, the use/uptake of the intervention (e.g., attrition/adherence metrics, use over time, number of logins etc.), in addition to primary/secondary outcomes. (Note: Only report in the abstract what the main paper is reporting. If this information is missing from the main body of text, consider adding it)

subitem not at all important   1   2   3   4   5   essential

We performed a "randomized controlled trial where 45 adults with chronic diseases and financial distress were randomized into an experimental (n=23) and a control group (n=22), with respectively 17 and 19 participants completing the 24-week HEP." The experimental group maintained a "HEP adherence frequency of 4 ± 2 times/week at 8 and 24 weeks ($P=.29$), whereas in the control group HEP adherence decreased from 4 ± 2 to 3 ± 2 times/week ($P=.07$), with a significant difference ($P=.04$) between groups at 24 weeks. Sixty-eight percent of participants sent videos. They sent on average 68% of the requested number of videos. The average score for satisfaction with PT care was maintained at 87% in the experimental group ($P=1.00$) whereas it dropped from 89% at 8 weeks to 74% at 24 weeks ($P=.008$) in the control group. No app-related adverse effects were reported."

1b-v) CONCLUSIONS/DISCUSSION in abstract for negative trials

Conclusions/Discussions in abstract for negative trials: Discuss the primary outcome - if the trial is negative (primary outcome not changed), and the intervention was not used, discuss whether negative results are attributable to lack of uptake and discuss reasons. (Note: Only report in the abstract what the main paper is reporting. If this information is missing from the main body of text, consider adding it)

The Hudl app/telehealth is feasible for delivering HEP and helps participants with chronic diseases and financial distress "maintain HEP adherence".

INTRODUCTION

2a) In INTRODUCTION: Scientific background and explanation of rationale

2a-i) Problem and the type of system/solution

Describe the problem and the type of system/solution that is object of the study: intended as stand-alone intervention vs. incorporated in broader health care program? Intended for a particular patient population? Goals of the intervention, e.g., being more cost-effective to other interventions, replace or complement other solutions? (Note: Details about the intervention are provided in "Methods" under 5)

Most HEPs are delivered on paper to be practiced at home, and accountability is checked at the next PT visit. However, "low HEP adherence is common", especially when exercising is required over a long period of time. Exercise adherence is even more negatively impacted when patients have a lower socio-economic status.

"Low HEP adherence is a serious problem because limited adherence to long-term exercise will greatly compromise improvement or stabilization of impairments related to chronic diseases. Therefore, there is a need to find an effective delivery method for HEP (i) that is more inspiring and satisfying to patients, so that they are motivated to keep practicing at home for an extended period of time; and (ii) that can be used as a tool to provide professional feedback on exercise correctness."

2a-ii) Scientific background, rationale: What is known about the (type of) system

Scientific background, rationale: What is known about the (type of) system that is the object of the study (be sure to discuss the use of similar systems for other conditions/diagnoses, if appropriate), motivation for the study, i.e. what are the reasons for and what is the context for this specific study, from which stakeholder viewpoint is the study performed, potential impact of findings [2]. Briefly justify the choice of the comparator.

Apps on mobile phones or on touchscreen tablets could potentially be an effective tool to provide such feedback and motivation. Regular feedback from a PT has shown to be essential to correctly execute the HEP. However, so far, studies in which apps were used for rehabilitation provided only occasional phone support from a PT or a virtual coaching to motivate participants to perform the app-based exercises. These methods "limit the extent to which individualized feedback can be given."

To overcome this problem, we have chosen to use the free Hudl Technique® app aiming to help patients with HEP adherence... "enables the PT to provide individualized feedback on the patients self-recorded videos by overlaying audio and visual feedback cues.[15] In addition, the cost of PT care via telehealth (ie, providing and sending individualized feedback from a PT to a patient via the Hudl app) is reimbursable through Medicaid and similar health care coverage, thereby making it available to a wide range of patients, particularly in those at higher risk because of a lower socio-economic status, who are in need of long-term HEPs."

Only 3 studies have used the Hudl app in sports medicine such that (i) the app was used to demonstrate features for potential use in sports medicine. In fact, to the best of our knowledge, "no studies have reported on the use of the Hudl app for adults with chronic diseases".

2b) In INTRODUCTION: Specific objectives or hypotheses

Does your paper address CONSORT subitem 2b? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

Therefore, our "primary objective" was to conduct an exploratory study in adults with chronic diseases and in financial distress to evaluate our hypothesis that the Hudl app combined with telehealth (experimental group) results in a better HEP adherence than when HEP is delivered through the standard paper format (control group). We defined adults in financial distress as those receiving Medicaid or similar health care assistance. Since our primary goal of this pilot study was to assess overall feasibility of the use of the Hudl app in adults with chronic diseases in general, we chose to recruit adults with a wide range of chronic diseases to mimic the real-world situation of clinical PT practice instead of focusing on a specific chronic disease. The features of Hudl app include videos of the PT demonstrating the exercises, and individualized feedback given by the PT through digital features of the Hudl app projected on the patient self-recorded videos. We "hypothesize" that these unique features of Hudl app would likely motivate the participants to stay on the program such that HEP adherence would be significantly higher in the experimental group than in the control group. Since patient satisfaction has been linked to the success of treatment adherence, we "also hypothesize" that our app-based approach will result in a higher overall PT satisfaction in the experimental group compared to the control group. To test our hypotheses, we measured weekly the HEP adherence (ie, how often they practice HEP/week) and compliance in returning self-recorded videos and we sent out a questionnaire at 8 and 24 weeks to inquire about their satisfaction with PT care, and, for the experimental group, their satisfaction with

METHODS**3a) Description of trial design (such as parallel, factorial) including allocation ratio**

Does your paper address CONSORT subitem 3a? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"Using a randomized controlled design, 60 sealed envelopes were used for the 1:1 participant allocation." The treating therapist and data analyst were blinded to the allocation.

3b) Important changes to methods after trial commencement (such as eligibility criteria), with reasons

Does your paper address CONSORT subitem 3b? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

We did not have any important changes to the method after trial commencement.

3b-i) Bug fixes, Downtimes, Content Changes

Bug fixes, Downtimes, Content Changes: ehealth systems are often dynamic systems. A description of changes to methods therefore also includes important changes made on the intervention or comparator during the trial (e.g., major bug fixes or changes in the functionality or content) (5-iii) and other "unexpected events" that may have influenced study design such as staff changes, system failures/downtimes, etc. [2].

"All patients were instructed to perform the exercises daily at home without equipment. The control group received individualized HEP on paper and did not receive feedback. To keep the same incentive for both groups before randomization, the control group also received a tablet but without the Hudl app installed. The participants in the experimental group received a tablet and were trained on using the Hudl app. The experimental group received weekly videos with individualized HEP (ranging between 4min 37sec and 9min 23sec) demonstrated by the telehealth-physical therapist. After reviewing the telehealth-physical therapist's video, the participants video-recorded their HEP performance, showing at least one set of repetitions of all required exercises. They additionally reported whether they had completed all required sets. The required sets included 3 trials/sets for all strengthening exercises (max 10 repetitions each) and 3 trials/sets for all balance exercises (max 30sec each). The telehealth-physical therapist reviewed the content and compliance to the HEPs and created a critiqued video review using the Hudl app tools "

4b) Settings and locations where the data were collected

The control group received individualized HEP on paper and did not receive feedback. ... The experimental group "received weekly videos with individualized HEP" (ranging between 4min 37sec and 9min 23sec) demonstrated by the telehealth-physical therapist. After reviewing the telehealth-physical therapist's video, the participants video-recorded their HEP performance, showing at least one set of repetitions of all required exercises. They additionally reported whether they had completed all required sets. The telehealth-physical therapist "reviewed the content and compliance to the HEPs and created a critiqued video review using the Hudl app tools". Participants reviewed the critiqued video and, within a few days, "received a new video from the telehealth-physical therapist with HEP for the following week". The participants only received a new video if the participants returned a video to the telehealth-physical therapist.

At 8 and 24 weeks, participants "completed a questionnaire anonymously online" (38%) "or in paper format (62%) if participants had trouble completing the online survey." The survey asked the participants to quantify average HEP adherence/week, overall PT satisfaction and, for the experimental group, satisfaction with the app/telehealth use. Scoring for questions ranged from 1 (e.g., very dissatisfied/difficult) to 7 (e.g., very satisfied/easy). Overall PT satisfaction encompassed both the Hudl app/telehealth use and care/feedback from the telehealth-physical therapist and treating PT service for the experimental group, and HEP on paper and the treating PT service for the control group.

4b-ii) Report how institutional affiliations are displayed

Report how institutional affiliations are displayed to potential participants [on ehealth media], as affiliations with prestigious hospitals or universities may affect volunteer rates, use, and reactions with regards to an intervention. (Not a required item – describe only if this may bias results)

The control group received individualized "HEP on paper" and did not receive feedback. To keep the same incentive for both groups before randomization, the control group also received a tablet but without the Hudl app installed. The participants in the experimental group "received a tablet and were trained on using the Hudl app."

5-viii) Mode of delivery, features/functionalities/components of the intervention and comparator, and the theoretical framework

Describe mode of delivery, features/functionalities/components of the intervention and comparator, and the theoretical framework [6] used to design them (instructional strategy [1], behaviour change techniques, persuasive features, etc., see e.g., [7, 8] for terminology). This includes an in-depth description of the content (including where it is coming from and who developed it) [1], "whether [and how] it is tailored to individual circumstances and allows users to track their progress and receive feedback" [6]. This also includes a description of communication delivery channels and – if computer-mediated communication is a component – whether communication was synchronous or asynchronous [6]. It also includes information on presentation strategies [1], including page design principles, average amount of text on pages, presence of hyperlinks to other resources, etc. [1].

"After reviewing the telehealth-physical therapist's video," the "participants video-recorded their HEP performance", showing at least one set of repetitions of all required exercises. They additionally reported whether they had completed all required sets. The telehealth-physical therapist "reviewed the content and compliance to the HEPs and "created a critiqued video review" using the Hudl app tools". Participants reviewed the critiqued video and, within a few days, "received a new video from the telehealth-physical therapist with HEP for the following week". The participants only received a new video if the participants returned a video to the telehealth-physical therapist.

5-ix) Describe use parameters

Describe use parameters (e.g., intended "doses" and optimal timing for use). Clarify what instructions or recommendations were given to the user, e.g., regarding timing, frequency, heaviness of use, if any, or was the intervention used ad libitum.

1   2   3   4   5

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

No changes to trial outcomes

7a) How sample size was determined

NPT: When applicable, details of whether and how the clustering by care provides or centers was addressed

7a-i) Describe whether and how expected attrition was taken into account when calculating the sample size

Describe whether and how expected attrition was taken into account when calculating the sample size.

	1	2	3	4	5	
subitem not at all important	☐	☐	☐	☐	☐	essential

Does your paper address subitem 7a-i?

Copy and paste relevant sections from manuscript title (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

Your answer

7b) When applicable, explanation of any interim analyses and stopping guidelines

Does your paper address CONSORT subitem 7b? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

No interim analysis; this was a pilot/feasibility study

8a) Method used to generate the random allocation sequence

NPT: When applicable, how care providers were allocated to each trial group

Does your paper address CONSORT subitem 8a? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"Using a randomized controlled design, 60 sealed envelopes were used for the 1:1 participant allocation." "The treating therapist and data analyst were blinded to the allocation."

8b) Type of randomisation; details of any restriction (such as blocking and block size)**Does your paper address CONSORT subitem 8b? ***

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

No restrictions. Half of the envelopes contained assignment to the intervention group; half to the control group.

9) Mechanism used to implement the random allocation sequence (such as sequentially numbered containers), describing any steps taken to conceal the sequence until interventions were assigned

Does your paper address CONSORT subitem 9? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

The 60 sealed envelopes contained 30 allocations to the experimental group and 30 to the control group. The envelopes were mixed before they were used. The therapist assigning the exercises was blinded to the allocation.

10) Who generated the random allocation sequence, who enrolled participants, and who assigned participants to interventions

Does your paper address CONSORT subitem 10? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

The envelopes were prepared by an independent person; the telehealth-physical therapist enrolled the participants; the randomly selected envelopes were the deciding factor for allocation. This was done by the telehealth-physical therapist.

11a) If done, who was blinded after assignment to interventions (for example, participants, care providers, those assessing outcomes) and how

NPT: Whether or not administering co-interventions were blinded to group assignment

11a-i) Specify who was blinded, and who wasn't

Specify who was blinded, and who wasn't. Usually, in web-based trials it is not possible to blind the participants [1, 3] (this should be clearly acknowledged), but it may be possible to blind outcome assessors, those doing data analysis or those administering co-interventions (if any).

	1	2	3	4	5	
subitem not at all important	☐	☐	☐	☒	☐	essential

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

The treating therapist and data analyst were blinded to the allocation. The telehealth-therapist was not blinded.

11a-ii) Discuss e.g., whether participants knew which intervention was the "intervention of interest" and which one was the "comparator"

Informed consent procedures (4a-ii) can create biases and certain expectations - discuss e.g., whether participants knew which intervention was the "intervention of interest" and which one was the "comparator".

	1	2	3	4	5	
subitem not at all important	☐	☐	☐	☐	☐	essential

Does your paper address subitem 11a-ii?

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

Your answer

11b) If relevant, description of the similarity of interventions

(this item is usually not relevant for ehealth trials as it refers to similarity of a placebo or sham intervention to a active medication/intervention)

Does your paper address CONSORT subitem 11b? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

The control group received HEP on paper without feedback "as is custom in PT practice."

12a) Statistical methods used to compare groups for primary and secondary outcomes

NPT: When applicable, details of whether and how the clustering by care providers or centers was addressed

Does your paper address CONSORT subitem 12a? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"The Shapiro-Wilk test informed the decision to conduct t-tests versus Mann-Whitney U tests for between-group comparisons at 24 weeks; or paired t-test versus Wilcoxon tests for within-group comparisons at 8 and 24 weeks. Nominal data were calculated with Chi square for between-group comparisons;[25] or with McNemar for within-group comparisons.

We compared between- and within-group differences for percentage HEP adherence (based on the patient-reported number of sessions completed per week). We calculated the effect size for between-group differences in HEP adherence at 24 weeks (Hedges'g for unequal sample sizes), and repeated-measures effect size (drepmeas)[28] for within-group differences in HEP adherence.

We calculated the percentage of people returning videos, and of those participants, how many videos they returned compared to the requested weekly videos (reported in percentage). For the 7 questions on app/telemedicine use, we reported descriptively on the percentage of people unsatisfied (scores 1-3), neutral (score 4) or satisfied (score 5-7). We used the Mc Nemar test to evaluate differences in ratio of people who were unsatisfied/neutral versus satisfied between 8 and 24 weeks. We reported on the proportion of people filling in the survey; and the percentage of people satisfied with the PT treatment (scores 5-7). The average score (in %) given on overall PT satisfaction at 8 and 24 weeks was compared between- and within-groups."

12a-i) Imputation techniques to deal with attrition / missing values

Imputation techniques to deal with attrition / missing values: Not all participants will use the intervention/comparator as intended and attrition is typically high in ehealth trials. Specify how participants who did not use the application or dropped out from the trial were treated in the statistical analysis (a complete case analysis is strongly discouraged, and simple imputation techniques such as LOCF may also be problematic [4]).

	1	2	3	4	5	
subitem not at all important	☐	☒	☐	☐	☐	essential

Clear selection

Does your paper address subitem 12a-i? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

This is a pilot/feasibility randomized controlled trial; therefore we did not employ imputation techniques. We reported at each time point how many participants were in the study. All participants that were allocated stayed in their respective group, but there was some attrition.

12b) Methods for additional analyses, such as subgroup analyses and adjusted analyses

Does your paper address CONSORT subitem 12b? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

Since this was a pilot/feasibility RCT, our sample size was not large enough to compute subgroup analyses

X26) REB/IRB Approval and Ethical Considerations [recommended as subheading under "Methods"] (not a CONSORT item)

X26-i) Comment on ethics committee approval

Your answer

17a) For each primary and secondary outcome, results for each group, and the estimated effect size and its precision (such as 95% confidence interval)

Does your paper address CONSORT subitem 17a? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

This was a pilot/feasibility study. Effect sizes are reported where relevant.

17a-i) Presentation of process outcomes such as metrics of use and intensity of use

In addition to primary/secondary (clinical) outcomes, the presentation of process outcomes such as metrics of use and intensity of use (dose, exposure) and their operational definitions is critical. This does not only refer to metrics of attrition (13-b) (often a binary variable), but also to more continuous exposure metrics such as "average session length". These must be accompanied by a technical description how a metric like a "session" is defined (e.g., timeout after idle time) [1] (report under item 6a).

Does your paper address subitem 17a-i?

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

Your answer

17b) For binary outcomes, presentation of both absolute and relative effect sizes is recommended

Does your paper address CONSORT subitem 17b? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

not applicable.

18) Results of any other analyses performed, including subgroup analyses and adjusted analyses, distinguishing pre-specified from exploratory

Does your paper address CONSORT subitem 18? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

This was an exploratory study (pilot / feasibility study).

18-i) Subgroup analysis of comparing only users

A subgroup analysis of comparing only users is not uncommon in ehealth trials, but if done, it must be stressed that this is a self-selected sample and no longer an unbiased sample from a randomized trial (see 16-iii).

Your answer

19) All important harms or unintended effects in each group

(for specific guidance see CONSORT for harms)

Does your paper address CONSORT subitem 19? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

There were no app-related adverse events. Unrelated adverse events were reported.

19-i) Include privacy breaches, technical problems

Include privacy breaches, technical problems. This does not only include physical "harm" to participants, but also incidents such as perceived or real privacy breaches [1], technical problems, and other unexpected/unintended incidents. "Unintended effects" also includes unintended positive effects [2].

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

Your answer

19-ii) Include qualitative feedback from participants or observations from staff/researchers

Include qualitative feedback from participants or observations from staff/researchers, if available, on strengths and shortcomings of the application, especially if they point to unintended/unexpected effects or uses. This includes (if available) reasons for why people did or did not use the application as intended by the developers.

"Our primary objective was to compare HEP adherence in a group using a Hudl app combined with telehealth with a group using HEP in paper format. Our results show that (1) participants that used the app/telehealth maintained their HEP adherence whereas the participants in the control group had a drop in HEP adherence; (2) the satisfaction with PT care dropped significantly in the control group from 8 to 24 weeks. "

22-ii) Highlight unanswered new questions, suggest future research

Highlight unanswered new questions, suggest future research.

Your answer

20) Trial limitations, addressing sources of potential bias, imprecision, and, if relevant, multiplicity of analyses**20-i) Typical limitations in ehealth trials**

Typical limitations in ehealth trials: Participants in ehealth trials are rarely blinded. Ehealth trials often look at a multiplicity of outcomes, increasing risk for a Type I error. Discuss biases due to non-use of the intervention/usability issues, biases through informed consent procedures, unexpected events.

Note: This was a pilot/feasibility study

"Our sample was large enough to demonstrate significant differences. However, because we chose a mixed group of adults with chronic diseases to mimic the real-life PT situation in the community, we cannot make any assumptions whether adults with one specific type of chronic disease have better HEP adherence with the use of the Hudl app/telerehabilitation than another type. This should be addressed in a future study. "

21) Generalisability (external validity, applicability) of the trial findings

NPT: External validity of the trial findings according to the intervention, comparators, patients, and care providers or centers involved in the trial

21-i) Generalizability to other populations

Generalizability to other populations: In particular, discuss generalizability to a general Internet population, outside of a RCT setting, and general patient population, including applicability of the study results for other organizations

Your answer

21-ii) Discuss if there were elements in the RCT that would be different in a routine application setting

Discuss if there were elements in the RCT that would be different in a routine application setting (e.g., prompts/reminders, more human involvement, training sessions or other co-interventions) and what impact the omission of these elements could have on use, adoption, or outcomes if the intervention is applied outside of a RCT setting.

Your answer

About the CONSORT EHEALTH checklist

As a result of using this checklist, did you make changes in your manuscript? *

- ☐ yes, major changes
- ☐ yes, minor changes
- ☒ no

What were the most important changes you made as a result of using this checklist?

Your answer

How much time did you spend on going through the checklist INCLUDING making changes in your manuscript *

almost 3h

As a result of using this checklist, do you think your manuscript has improved? *

- ☐ yes
- ☒ no
- ☐ Other:

Would you like to become involved in the CONSORT EHEALTH group?

This would involve for example becoming involved in participating in a workshop and writing an "Explanation and Elaboration" document

- ☐ yes
- ☒ no
- ☐ Other:

Clear selection

Any other comments or questions on CONSORT EHEALTH

The idea is great. I believe it would be more time efficient if we could check off a box saying that it is in the manuscript (and if really needed, provide line numbers instead of copy-paste).
